Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : COD

1. Problem Statement

In a ticket reservation system, you store the available seat numbers in a TreeSet. Users input their desired seat number, and the program checks whether the chosen seat is available.

Using a TreeSet ensures quick and efficient verification of seat availability, ensuring a smooth and organized ticket booking process.

Input Format

The first line of input contains a single integer n, representing the number of available seats.

The second line contains n space-separated integers, representing the available seat numbers.

The third line contains an integer m, representing the seat number that needs to be searched.

Output Format

The output displays "[m] is present!" if the given seat is available. Otherwise, it displays "[m] is not present!"

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4
2 4 5 6
5
Output: 5 is present!

Answer

```
import java.util.*;
class p{
   public static void main(String[] args){
      Scanner sc = new Scanner(System.in);
      int n=sc.nextInt();
      TreeSet <Integer> set = new TreeSet<>();
      for(int i=0;i<n;i++){
         set.add(sc.nextInt());
      }
      int m=sc.nextInt();

      if(set.contains(m)){

         System.out.println(m + " is present!");
      } else {

         System.out.println(m + " is not present!");
      }
   }
}
```

Status : Correct ***Marks : 10/10***
